Review 1

Design Plan: Hotel Management System	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date: 20-08-2025	Version 1.0	Page No: 1 of 41

Problem Definition

1.1. Background

The Lotus Grand Hotel is a 45-room mid-sized hotel in Hồ Chí Minh city, Vietnam. The hotel has four floors with a mix of Standard and Deluxe rooms. It caters to tourists, business travelers, and families. Despite a growing customer base, the hotel relies heavily on manual systems for reservations, check-in/check-out, and billing.

1.2. Problems Identified

1.2.1. Reservation & Availability Issues

Bookings are recorded manually in spreadsheets and paper forms, causing double-bookings.

Guests often call to check availability, but staff cannot answer accurately without manually checking records.

1.2.2. Slow Check-In/Check-Out

Guests wait while staff manually verify reservations, calculate bills, and write invoices.

Delays cause dissatisfaction and poor reviews.

1.2.3. Room Status Confusion

Housekeeping updates are not real-time; front desk does not always know which rooms are clean or out of service.

This causes delays in assigning rooms to waiting guests.

1.2.4. Poor Financial Oversight

Revenue and expenses are recorded separately in spreadsheets.

	Prepared by (Student) Project Group No: 04	Approved by (Faculty) LÊ THANH NHÂN
Signature		
Date		

Design Plan: Hotel Management System	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date: 20-08-2025	Version 1.0	Page No: 2 of 41

Management cannot generate daily occupancy or revenue reports efficiently.

1.2.5. No Security or Accountability

Paper records make it impossible to trace which employee handled a reservation or payment.

Mistakes or fraud cannot be tracked.

1.3. Problem Statement

1.3.1 General Requirements

- The hotel requires a desktop-based room management system to manage 45 rooms at The Lotus Grand Hotel.
- The system must allow staff to check which rooms are empty or occupied in real-time.
- The system must store basic guest information (full name, date of birth, phone number, email, check-in date, check-out date).
- The system must allow simple booking, check-in, and check-out operations.
- The system must allow staff accounts with different access rights (administrator, receptionist).

1.3.2. Functional Requirements

The receptionist should be able to:

- Register a guest and assign them to a room.
- View which rooms are available or occupied.
- Update check-in and check-out status.
- Search for guest information by name or room number.

	Prepared by (Student) Project Group No: 04	Approved by (Faculty) LÊ THANH NHÂN

Design Plan: Hotel Management System	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date: 20-08-2025	Version 1.0	Page No: 3 of 41

The manager should be able to:

- Create and manage staff accounts.
- Manage and edit room information (e.g., room number, capacity, room type (standard or VIP)).
- View system activity logs.

Effective Date: 20-08-2025	Version 1.0	Page No: 4 of 41

Customer Requirements Specifications

Based on the issues above, the hotel management has defined the following requirements for the Hotel Management System:

2.1. Functional Requirements

2.1.1. Reservation Management

Create, edit, cancel reservations.

Check real-time room availability to prevent double-booking.

Support walk-in reservations.

2.1.2. Guest Management

Store guest information (name, DOB, contact, ID).

Maintain guest history (previous stays, preferences).

2.1.3. Room & Housekeeping Management

Show room status (Vacant, Occupied).

Track maintenance periods and reasons for out-of-service rooms.

2.1.4. Check-In/Check-Out

Simple workflow for check-in and check-out.

Auto-generate guest invoices with tax and service charges.

Allow early check-out or stay extension.

2.1.5. Billing & Payments

Create folios with line items (room rate, extras, service charges).

Record payments (cash, card, transfer).

	Prepared by (Student) Project Group No: 04	Approved by (Faculty) LÊ THANH NHÂN
Signature		
Date		

Design Plan: Hotel Management System	Document Name: Customer Requirements Specifications	SWD/Form No.02/CRS/Ver1.0
Effective Date: 20-08-2025	Version 1.0	Page No: 5 of 41

Issue refunds or adjustments with manager approval.

2.1.6. Reporting

Generate reports: occupancy rate, revenue summary, housekeeping status.

Export reports to PDF and CSV for sharing.

2.1.7. User Management & Security

Role-based access (Front Desk, Manager).

Audit log for key operations (reservations, payments, cancellations).

Secure authentication with username & password.

2.2. CRS/Requirements Specifications

Client/Project Undertaken:		
1.	List of inputs to the system	
	1	Receptionist: - Guest registration data (name, DOB, check-in/out dates) - Room assignment - Reservation creation/cancellation - Payment info
	2	Manager: - Add/edit/delete staff accounts - View reports
2.	List of outputs expected from the system	
	1	Receptionist: - Updated room status (occupied or empty) - Guest list - Reservation confirmation - Invoice / receipt
	2	Manager: - Staff account updates - Occupancy and revenue reports
3.	Overview of processes involved in the system	
	1	Receptionist: - Check room availability

		<ul style="list-style-type: none"> - Assign room - Record guest data - Calculate billing
	2	Manager: <ul style="list-style-type: none"> - Validate staff data - Generate occupancy & revenue reports

Admin/Project Undertaken:		
1.	List of inputs to the system	
		System configuration
		User account roles
2.	List of outputs expected from the system	
		Updated system configuration
		Role permissions applied
3.	Overview of processes involved in the system	
		Validate admin actions
		Apply system settings
Hardware and software required for implementing the project		
1	Operating System: Windows 10 or higher.	
2	Hardware: Dual-core CPU, 2GB RAM or better.	
3	Software: JavaFX-based desktop application with Microsoft SQL server database.	
4	Unicode Fonts: Arial, Tahoma, Times New Roman, Lucida Console.	

2.3. CRS/Customer Acceptance Criteria

Sinh viên dùng cấu trúc để mô tả sau:

Given [precondition] **when** [action] **then** [result]

S.No	Customer's Acceptance Criteria
1	Given the manager is logged into the system When they view the dashboard Then they should see the current occupancy status of all rooms.
2	Given the receptionist is logged into the system When they check in a guest with valid details Then the system should mark the selected room as “occupied” and save the guest’s info.

2.4. Project Plan

1. Project Details		
+	Name of the Client:	
	The Lotus Grand Hotel	
+	Date of Project Plan:	
	Start: 20 th August 2025	
+	Project Vision/Objectives:	
	The system aims to simplify and digitalize the management of the hotel's 45 rooms, covering both standard and VIP categories. The vision is to reduce manual errors, improve staff efficiency, and provide quick access to customer and room information.	
+	Scope:	
	Develop a desktop-based hotel management system. Core features: - Room availability tracking (occupied, vacant, under maintenance). - Guest information storage (name, date of birth, contact). - Basic booking/check-in/check-out handling. Out of scope: - Online booking integration. - Mobile application support. - Complex payment gateway integration.	
+	Our understanding of the client organization:	
	The Lotus Grand Hotel is a medium-sized hotel with 45 rooms, ranging in capacity from 1 to 3 guests per room. Rooms are classified as Standard or VIP. The hotel requires a system that allows staff to quickly manage room status, record guest details, and assist with smooth daily operations.	
+	Project Organization with Responsibilities and Authorities:	
	- Client (Hotel Manager): Provides requirements, validates system features, final approval. - Reception Staff: End-users of the system; responsible for check-in/check-out operations. - Project Team (Developers/Students): Responsible for system design, coding, and

Design Plan: Hotel Management System	Document Name: Final checklist	SWD/Form No.09/FC/Ver1.0
Effective Date: 20-08-2025	Version 1.0	Page No: 37 of 41

Final checklist

Sr.No	Aspect Tested	Suggestion/Remarks
1	Application launches successfully on all target machines (Windows)	
2	Login screen functions correctly: Test with valid/invalid credentials	
3	User roles: Admin/Receptionist/Staff permissions display and work correctly	
4	Dashboard displays correct information (available rooms, bookings, revenue, etc.)	
5	Room management: Add, edit, delete, and search rooms work as expected	
6	Customer management: Add, edit, delete, and search customers work correctly	
7	Booking system: Room booking, cancellation, and room change functions work correctly	
8	Billing/Payment module: Total calculation, invoice printing, and payment processing are correct	
9	Check-in/Check-out process: Functions are complete and accurate	
10	Reports: Revenue, customer, and room reports display accurate data	
11	Database connectivity: Connection with database (SQL Server) is stable

Design Plan: Hotel Management System	Document Name: Final checklist	SWD/Form No.09/FC/Ver1.0
Effective Date: 20-08-2025	Version 1.0	Page No: 38 of 41

12	Validation: Input fields validate correctly (email, phone number, dates, etc.)	
13	Error handling: Clear error messages are shown when issues occur (connection, invalid input, etc.)	
14	UI/UX: JavaFX interface is responsive, user-friendly, and displays correctly on various resolutions	
15	Performance: Application loads quickly, screen transitions are smooth, no lag	
16	Search & Filters: Searching and filtering for rooms, customers, and bookings work correctly	
17	JavaFX controls: Buttons, menus, and TableViews work as expected	
18	Security: Password encryption and secure login implemented	
19	Backup/Restore functionality: Data backup and restore features work correctly	
20	Cross-platform testing: Application runs on multiple operating systems (if required)	
21	Exception logging: Logs record errors properly for debugging	
22	Installer/Executable packaging: .jar or .exe installer runs smoothly	
23	Third-party libraries: All dependencies (JavaFX, JDBC, Hibernate, etc.) integrate without errors	
24	Future feature placeholders: Unimplemented buttons or menus display proper messages
